<b>POSTURE</b> Infant supine, look mainly at position of legs but also note arms. score predominant posture.	arms & legs extended or very slightly flexed	legs slightly flexed	leg well flexed & abducted near abdomen	abnormal posture a) spasticus b)
<b>ARM RECOIL</b> Take both hands, quickly extend arms parallel to the body. Count to three. Release. Repeat X 3	arms do not flex	arms flex slowly, not always, not completely	arms flex slowly more complete	arms flex quickly and completely
<b>ARM TRACTION</b> Hold wrist and pull arm upwards. Note flexion at elbow and resistance while shoulder lifts off table. Test each side separately	arms remain straight, no resistance	arms flex slightly or some resistance felt	arms flex well to shoulder lifts, then straighten	arms flex at approx 100° & maintained as shoulder lifts
<b>LEG RECOIL</b> Take both ankles in one hand, flex hip+knees. Quickly extend. Release. Repeat X3	No flexion	incomplete or variable flexion	complete but slow flexion	complete fast flexion
<b>LEG TRACTION</b> Grasp ankle and slowly pull leg upwards. Note flexion at knees and resistance as buttocks lift. Test each side separately	legs straight no resistance	legs flex slightly or some resistance felt	legs flex well to bottom lifts up	knees flexes, remains flexed when bottom up
<b>POPLITEAL ANGLE</b> Fix knee on abdomen, extend leg by gentle pressure with index finger behind the ankle. Note angle at knee. Test each side separately	180°	150°	110°	90°
<b>HEAD CONTROL (1) (extensor tone)</b> Infant sitting upright, hold at shoulder. Let head drop forward.	no attempt to raise head	infant tries, effort better felt than seen	raises head but drops forward or back	raises head, remains vertical, if may wobble
<b>HEAD CONTROL (2) (flexor tone)</b> Infant sitting upright, hold at shoulder. Let head drop backward.	no attempt to raise head	infant tries, effort better felt than seen	raises head but drops forward or back	raises head, remains vertical, if may wobble
<b>HEAD LAG</b> Pull infant to towards sitting posture by traction on both wrists & support head slightly. Also note arm flexion	head drops & stays back	tries to lift head but it drops back	able to lift head slightly	lifts head in line with body
<b>VENTRAL SUSPENSION</b> Hold infant in ventral suspension; observe curvature of back, flexion of limbs and relation of head to trunk	back curved, head & limbs hanging straight	back curved, head, limbs slightly flexed	back slightly curved, limbs flexed	back straight, head in line, limbs flexed

Figure 1

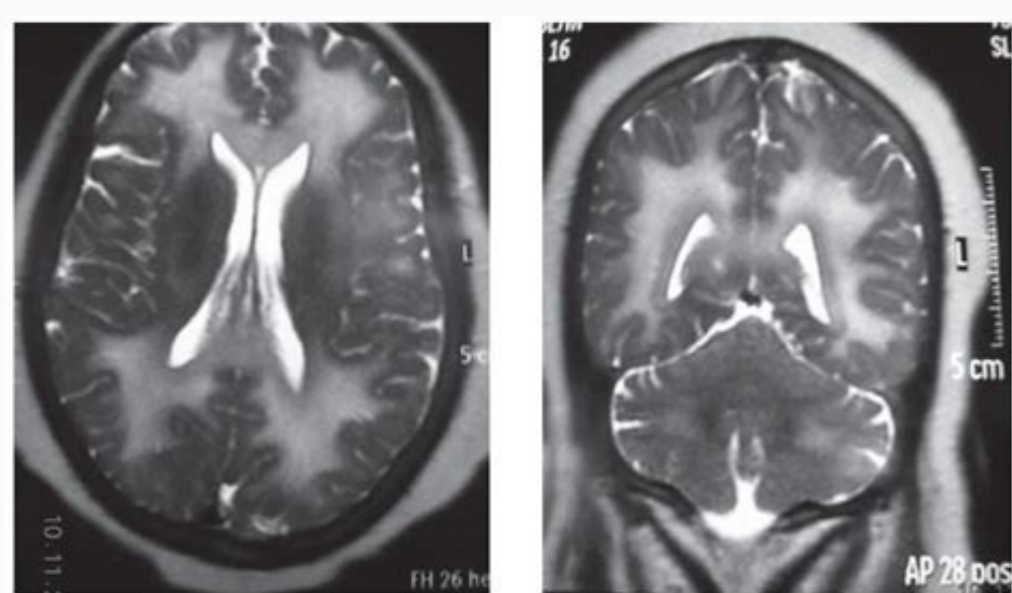

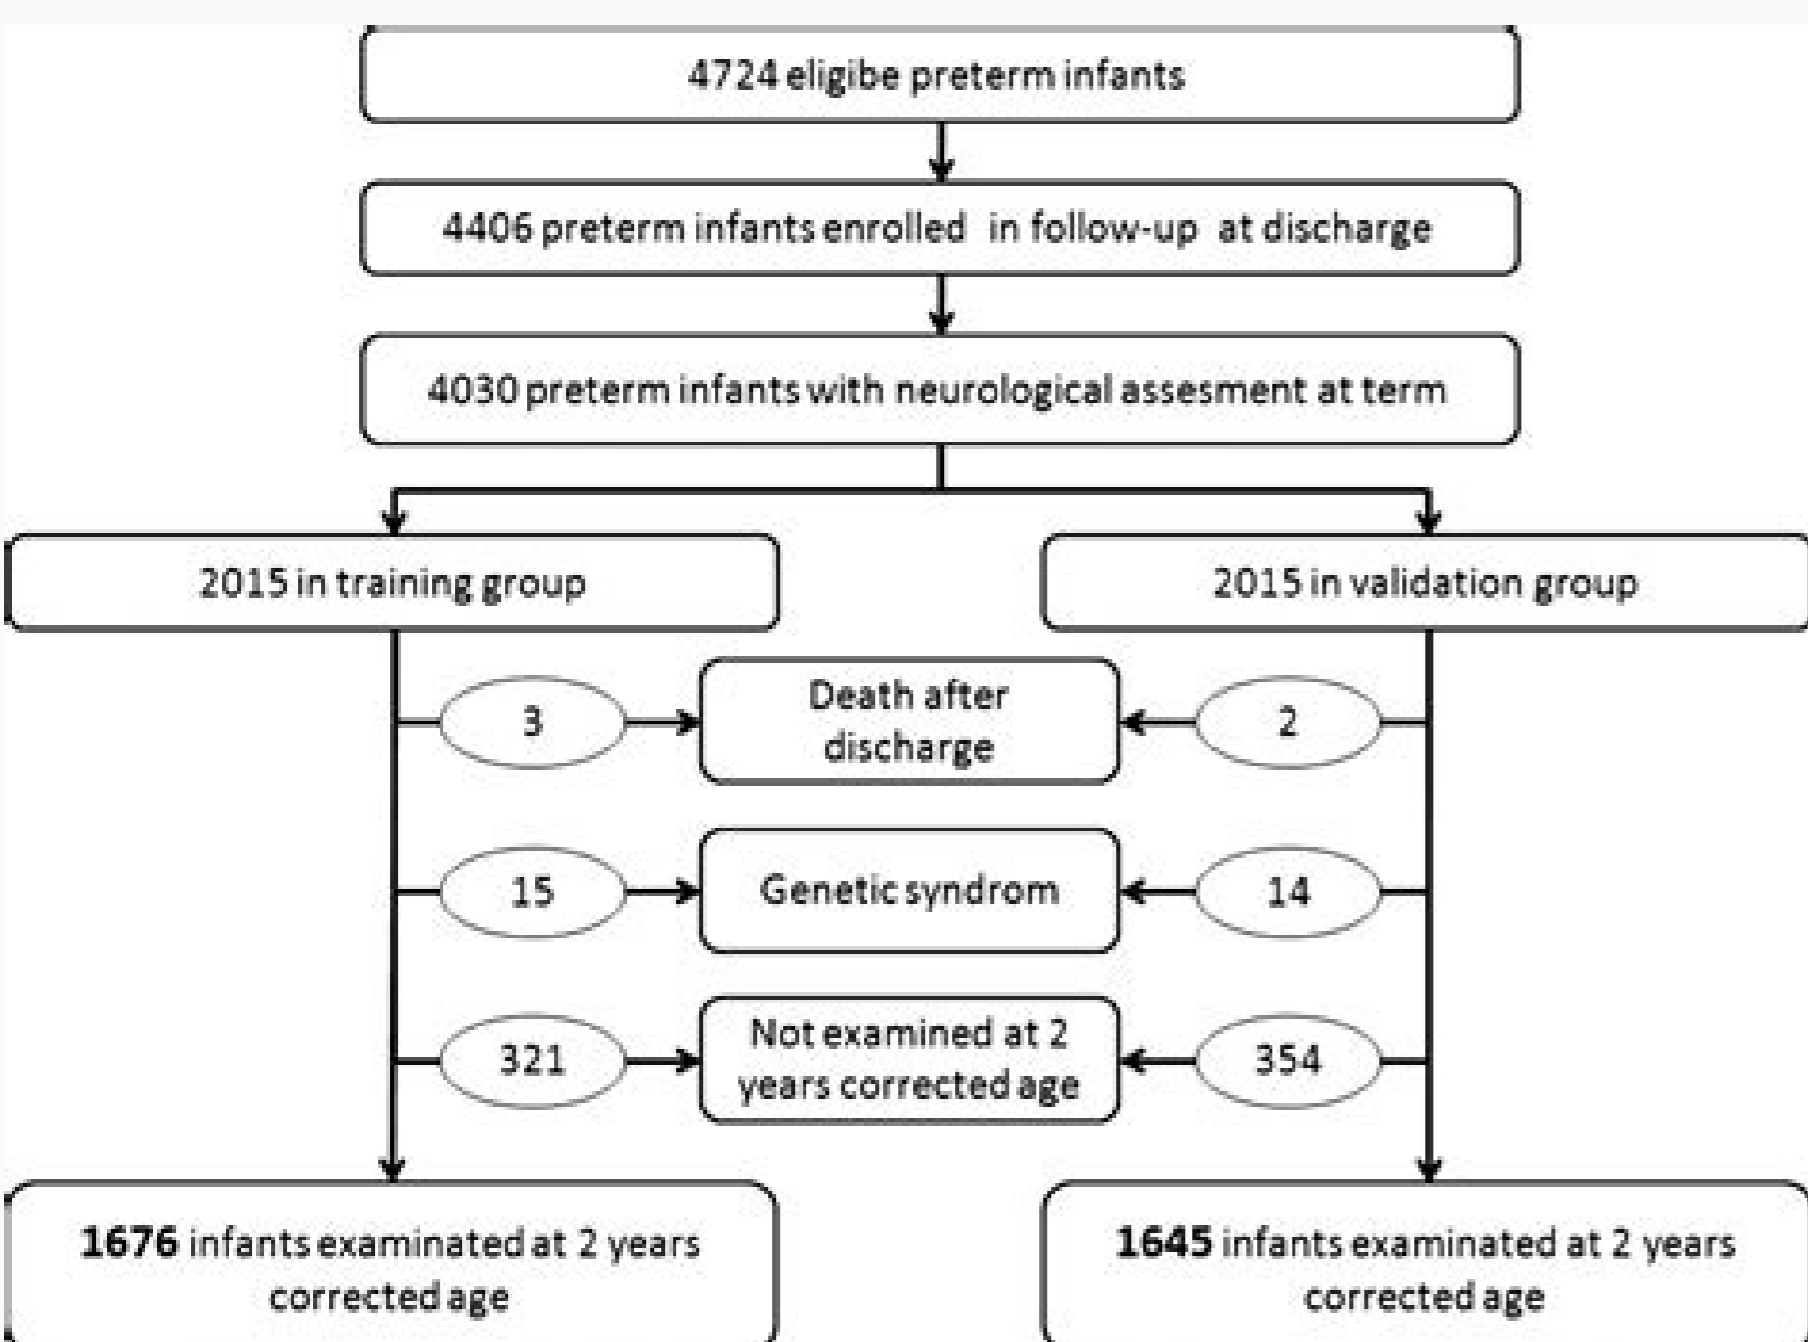

Figura 2. (A) Imagen axial T2 que muestra compromiso de sustancia blanca de centro oval con preservación de núcleos de la base. (B) Imagen coronal T2 que pone de manifiesto alteración de la sustancia blanca del centro oval, con atenuación en las áreas periventriculares. Con compromiso de la sustancia blanca cerebelosa con preservación de la corteza y núcleo dentado.
